This book is the first major account of innovation and entrepreneurship in the Arab higher-education sector. It provides an update of the current situation and advances reasons for the under-performance of Arab universities in international ranking tables and the weaknesses of Arab economies. Specific proposals are made for upgrading curricula and assessment procedures as well as providing an environment that fosters innovation and entrepreneurial behaviour. The roles of university-based technology and business parks are examined, with examples of successful business partnerships in the Arab region, Europe, and North America. Opportunities for innovation and entrepreneurship have never been greater with the wealth of rapidly developing transformative technologies that are driving the international knowledge economy. This book puts forward proposals for the management and exploitation of intellectual property, and for establishing businesses.

Regional Innovation Impact of Universities

The book critically reflects on some of the most important novelties and experimentations in the context of the European Union’s renewed urban and regional policy in the last programming period, 2014-2020. In particular, it examines four main innovations characterizing this period, which emerged as a result of the deep rethinking and reorganization of Cohesion Policy in the spirit of the place-based approach to local development, i.e. the development of the smart specialization strategy, the establishment of macro-regions, the focus on the urban dimension as a horizontal priority, and the role of social innovation in urban policy. Unlike other similar books, it analyzes the urban dimension of the reformed EU cohesion policy, especially focusing on its interplay with the regional dimension, and which has not been fully addressed to date. The book is intended for social scientists engaged in research on European issues, especially from regional and urban perspectives, policy-makers, particularly at the local level, and graduate students interested in regional and urban European matters.

Towards Cohesion Policy 4.0

Place-based innovation policy design requires an in-depth understanding of territories and their
complexity. Traditional statistics, with a lack of publicly available data at the disaggregated (sub-sectoral and regional) level, often do not provide adequate information. Therefore, new methods and approaches are required so that scientists and experts that can inform decision-makers and stakeholders in choosing priorities and directions for their innovation strategies. The book replies to such a need by offering advanced mapping methodologies for innovation policies with a special focus on approaches that take into account place-based policies.

New Metropolitan Perspectives

In the context of the debate on the future of Europe, this book makes the case for a new approach to structural transformation, growth and cohesion in the EU. It explores both the opportunities and challenges from globalisation and technological change, the widening differences in productivity between leading and lagging regions, and the need for a new policy framework capable of delivering inclusive growth. The Regional Studies Association’s Policy Impact Books form a series of punchy, policy facing books addressing issues of contemporary concern. There is a consistent focus on the impact of policy research both in terms of its reach to policy, academic and practitioner communities and also in its significance, to show how evidence can inform policy change within regional and urban studies.

New Paths of Entrepreneurship Development

There is a broad and long-standing debate on possible solutions to the regional vulnerabilities of globalisation. In 2014, the European Commission began implementing Smart Specialisation Strategy, a place-based strategy of growth, regional transformation and new industrial policy with collective entrepreneurial discovery processes (EDP) at its core. This volume approaches the mystery of entrepreneurial discovery; that is, how relevant knowledge is created, converted and shared in a process of discovery. These essays bring together scholars from economics, geography, sociology, organisation studies, innovation studies, and complexity theory, offering new approaches to overcome the limitations of place-based development and suggesting improved methods leading to growth.

Regional Innovation Policy

As the global economy continues to evolve, the idea of sustainability has become a prevalent area of concentration. Businesses are searching for more environmentally and socially conscious practices as the market distances itself from the industrial age. Implementing sustainable initiatives starts with entrepreneurs, as these individuals are the foundation for creating and building profitable societies. Understanding the practice of sustainable entrepreneurship is pivotal in predicting future trends in business and the economy. Building an Entrepreneurial and Sustainable Society provides emerging research exploring the theoretical and practical aspects of sustainability within entrepreneurship and its applications in modern socioeconomics. Featuring coverage on a broad range of topics such as public policies, internationalization, and social innovation, this book is ideally designed for entrepreneurs, business specialists, professionals, researchers, managers, economists, educators, scholars, and students seeking current research on the evolution of sustainable entrepreneurship and its contextual factors.

EU Regional and Urban Policy

This book provides a comprehensive overview of role of entrepreneurship, technology commercialisation and innovation policy for the achievement of economic development and prosperity in African societies. It adopts a broad innovation systems approach. The book examines entrepreneurship, innovation, and technology commercialisation alongside context-specific factors associated with them. It also provides an interdisciplinary perspective, by discussing the above disciplines in a connected way. This book is presented in three distinct parts. It starts by discussing entrepreneurship and the state of the entrepreneurial ecosystem in Africa. It then moves on to present technology commercialisation in Africa, before finally discussing the future directions for entrepreneurship, technology commercialisation and innovation policy. This broad picture provided in the book enables the reader to grasp the relevant messages, whilst the detailed analysis applies world-class theories and frameworks to deepen the readers
understanding of key concepts and issues examined.

**Territorial Impact Assessment**

The regional and urban development policy of the European Union, or more precisely, EU Cohesion Policy, is undergoing change. This development is driven by the enormous transformations in European regions and by shifts in thinking and analysis. The issu

**The Entrepreneurial Discovery Process and Regional Development**

Regional growth in the European Union hinges to a large extent on smart specialization, a new and exciting theme in economic innovation studies. Advances in the Theory and Practice of Smart Specialization illuminates problems that have stifled the implementation of smart specialization policies, such as unique regional constraints and the inter-dependent demands of economic growth and commercial development. Forward-looking and pragmatic, it provides guidance for developing smart specialization strategies both to those involved in European affairs and others grappling with regional innovation and economic development worldwide. Emphasizes specific contexts for smart specialization, its international approach and institutional preconditions Examines comparable initiatives worldwide Explains how to implement smart specialization policies given different development levels of regions and countries

**Building an Entrepreneurial and Sustainable Society**

The rapid urbanization that began with industrialization has begun to cause many problems. New approaches are emerging today to minimize these problems and make urban areas more livable. These problems include insufficient social facilities in urban areas for increasing populations due to migration and unbalanced use of green areas, water, and energy resources due to urbanization. Careless consumption and the pollution of natural resources will cause people many more problems in the future than they do today in urban development. Many professional disciplines have noticed this unbalanced development in urban areas. Urban areas have larger populations than rural areas today. Urban areas are developed neglectfully. Sustainability is needed as a criterion for urban areas to develop in a more livable and healthy fashion. Sustainable urban development approaches are seen in many fields, ranging from land use to the use of natural resources in urban areas.

**Proceedings of the II International Triple Helix Summit**

This book focuses on the main challenges that cities, regions and other territories at sub-national level face when it comes to designing and implementing a territorial strategy for economic development and competitiveness. There is a widespread recognition that territories need to construct strategies that focus on shaping sustainable competitive advantages. To do this they draw upon their own unique resources and capabilities alongside intelligence on existing technological and market trends. However, there is still a notorious lack of both theoretical and empirical research on this issue. The first part of this book develops a theoretical framework for understanding and analysing territorial strategy. This framework asks three questions of territorial strategy - what for, what, and how - looking closely at the key relationship between strategy and policy. The second part is dedicated to exploring this framework in practice through application to a series of unique cases from around the world at different territorial levels, from regions such as the Basque Country, Navarre and Murcia in Spain, Okanagan (British Columbia) in Canada, Wales in the United Kingdom, and the cross-border region of the Øresund in Denmark–Sweden, as well as the city of Rafaela in Argentina. Each case offers something different and enables the framework to be thoroughly tested, generating concluding reflections that add real value for scholars and policy-makers interested in and working in the field of territorial strategy. This volume is intended for the academic community, the policy community (government leaders, policy-makers, policy researchers and consultants) and university students and teachers at different levels interested in the areas of territorial competitiveness, regional development, competitiveness policies and processes of territorial strategy.
This book presents a comprehensive debate and analysis of existing Territorial Impact Assessment (TIA) methodologies, designed under the auspices of the ESPON programme since the mid-2000s. This is intended to serve as a TIA handbook for the reader, to better understand the main differences, advantages and shortcomings of each presented TIA methodology. It also serves as a manual for professors and students in the field of policy evaluation, and territorial analysis, as it presents concrete examples of the implementation of each TIA methodology, their formulas and intrinsic evaluation elements. The purpose of policy evaluation methodologies is to check the main effects of private and public investments, in order to report back to policymakers and citizens on their efficiency and effectiveness. Over the past decades, both in Europe and worldwide, there has been an increasingly awareness of the need to implement/reinforce policy evaluation practices, at all territorial levels. At the same time, it has become widely accepted that many policy interventions produce impacts in more than one dimensions of territorial development. In this context, the use of a holistic and territorial approach for policy impact assessment evaluation has rapidly been adopted by the European Commission as a mainstream policy evaluation procedure.

Creating Social Value Through Social Entrepreneurship

The first global workshop on Smart Specialisation was organised in Seville on 25 September 2018. This workshop has showcased the variety of experiences and interests generated by Smart Specialisation on the five continents and represented a first step towards the creation of an international community of Smart Specialisation. Building on the outcomes and lessons from this event, the present Science for Policy report brings together experiences, policy aspects, challenges and opportunities gravitating around the topic of Smart Specialisation worldwide, and elaborates on the further international potential of the Smart Specialisation concept and approach.

New Challenges in Economic Policy, Business, and Management

Smart specialisation is the new policy approach to the development of regional innovation systems across Europe and it involves fostering innovative and entrepreneurial initiatives which are well tailored to the local context. The different technologies, skills profiles, business activities, institutions and sectors which reflect a region’s economic strengths and potential are to be fostered and encouraged to diversify in ways which also exploit the region’s linkages with broader global value-chains. Yet, the ideas contained in the smart specialisation agenda have until now been primarily conceptual in nature. The Empirical and Institutional Dimensions of Smart Specialisation draws together some of the leading regional economists and scientists in Europe to analyse how smart specialisation is working in practice. This book investigates different dimensions of the agenda as it is developing across parts of Europe from both quantitative and qualitative perspectives. The quantitative analysis examines the nature of the diversification processes undertaken by regions and the interplay between the chosen local regional development priorities and the wider global value-chain impacts of these choices. Meanwhile, the qualitative analysis examines the institutional opportunities and challenges facing policy makers and the key elements most likely to provide the underpinnings of a workable set of policy settings. The book is aimed both at academic researchers interested in the interface between economic geography and regional innovation systems as well as at policy makers making public policy decisions related to regional development at the local, city, regional or national levels.

The Regional and Urban Policy of the European Union

The first part of this volume broadens the understanding of contemporary industrial policy in local, regional, national, and international contexts. The chapter by Wojnicka-Sycz (2020) undertakes one of the most important challenges in RIS3, i.e. the evaluation of the impact of regional SS industries on the development of Polish regions. Based on the spatial panel models for 2012-2017, she reveals the positive impact of SS industries’ employment dynamics on regional GDP per capita. The chapter responds to the research gap in a direct measurement of how SS areas affect regional development. The results provide the rationale for policy-makers to pursue these strategies further. The chapter contributes to regional New Industrial Policy by proving the efficiency of SS in strengthening regional performance. Factors and barriers to the development
of smart mobility in mediumsized Polish cities are the focus of the chapter by Kachniewska (2020). The author applies a comprehensive set of methods to tackle this issue and identifies the conditions for smart mobility, drawing primarily on expert opinions. The results enable a natural generalization of the identified determinants to the similar context of Polish towns, the more important that the research on medium cities is much rarer than studies on metropolises. This contribution belongs to the research streams of city governance and databased services, which are closely connected to and dependent on industrial digital transformation. Moreover, smart mobility addresses the objective of environmental protection, one of the crucial targets of NIP. Gódlewsk-Dzioboń (2020) performs international comparisons between Central and Eastern European Countries in 2020–2018. Particularly, she focuses on the sectoral transformation of the employment structure in these countries. Besides the important observations of spatial dynamics in sectoral structures, the chapter points to the increased importance of services relative to manufacturing in contemporary structural transformations. Thus, it justifies the expanded scope of New Industrial Policy that encompasses not only industry, recently refreshed with 4.0 Revolution, but also services, particularly the digital ones. The chapter by Czech (2020) identifies the impact of global debt on the national amounts outstanding of credit default swap contracts (CDS) in nonfinancial institutions. She finds the dynamics of the CDS notional amounts outstanding in response to global household indebtedness and total non-financial sector indebtedness in domestic banks. This contribution brings valuable practical insights about the core and dynamics of CDS and their usefulness in alleviating risks in international exchange. We find this input particularly relevant for industries and enterprises operating in global value chains. Widera (2020) performs a spatial analysis of the induced population potential of the communes in the Opolska region in 2000 and 2018. The econometric analysis revealed both the own potential of the communes and the interactions with neighboring communes to develop this potential. These findings are important to theorize about the bottom-level sources of territorial units’ potential, both internal and those stemming from spatial interactions. We find these conclusions relevant to understand local-level origins of regional transformations, as well as interdependencies among local territorial units. The next two parts of this volume present micro-level and bottom-up contexts for industrial policy. Particularly, these are the insights from management and business research and from the research on governing various stakeholder interests and networks. In the second part, based on management and business theory and empirical evidence, the authors discuss human resource and technological challenges faced by the contemporary industry. Potoczak (2020) performs a bibliometric research to recognize the advancement of the process approach in organizations. She finds the research on process improvement as emerging. The major research community in that area belongs to the IT field, while management researchers are still a minor group. The author recommends the increased interest from the management field as conducive to the 4.0 transformation of organizational processes. These results provide policy-relevant input to the understanding of how academic research tackles digital transformation in organizational processes. The chapter by Igielski (2020) uses a survey among a sample of large enterprise senior managers headquartered in Poland to check whether and how they develop employee skills for the challenges of Industry 4.0. The results are pessimistic since they reveal the lack of adaptive and developmental actions in this regard. Nevertheless, there is also a positive sign, namely the awareness of the challenges posed by the 4.0 revolution. Thus, the chapter is valuable for the recommendations as to competence development in industrial transition to the digital economy. Flak (2020) presents an interesting test for the system of organizational terms as to its usefulness in the practice of motivating people and in a dedicated software. Based on a research experiment in real-life business settings, the author proves the applicability of theory-driven organizational terms in software applications supporting managers in their motivating functions. The chapter contributes important observations as to the interrelations among managerial and technological resources in motivating employees. Sztorc (2020) investigates lean management tools at hotels in Poland, based on a large sample of hotel representatives. The results are helpful in understanding the types of lean management tools, as well as their major targets in the researched organizations. The input of the study rests in filling the research gap as to the particular tools of lean management applied in the hotel industry to improve services and processes. The focus of this chapter on a particular industry provides a relevant basis for further application and upgrading of this service sector. The chapter by Mazurkiewicz (2020) offers an assessment of the impact of national culture on career orientation and career values among Polish and Chinese students of economics. Surprisingly, the value system does not differ much between the two national samples, despite the distinct characteristics of the two national cultures, according to Hofstede’s method. Consequently, the author assumes national culture as moderator
of career values rather than their determinant. These results provide a contribution to the understanding of job motivations among future corporate employees, a critical determinant of all industrial transitions. Kowalik (2020) investigates the economic benefits perceived by student participants of scientific projects. Based on the survey, the author reveals students’ recognition of scientific projects as bringing economic effects. The study offers practical implications for young people engaging in research activities, as well as for research policy that might acknowledge additional important outcomes, besides purely scientific objectives. The third part discusses how governing networks and interests can ensure sustainable and socially responsible industries and enterprises. Sectoral and industrial collaborations are supposed to enhance industrial convergence (EOCIC, 2019). In this vein, Lis (2020) focuses on collaborative attitudes in clusters and technological parks. Cluster organizations are established to rip the localization and agglomeration economies, as well as synergies from cooperative links. Despite some history of operations, the surveyed Polish cluster initiatives and technology parks still reveal low development of enterprise cooperation. The author suggests self-evaluation of management and participants of the researched organizations to understand the accomplished level of collaboration and derive practical implications. This contribution is important to understand the performance of some organizational measures of industrial policy and their real input to industrial transformation. The chapter by Kowalczyk (2020) investigates sociocultural conditions of CSR-practices in the construction industry of selected European countries. Based on a survey with a large convenience sample, the author confirms the strength of stakeholder pressure on CSR practice as well as the mediating role of company culture in this relationship. At the same time, country differences were indicated as significant for CSR practice and worth further explanation of its variance. This study is valuable for the explanation of interests and stakeholder pressure affecting a particular industry, thus determining the development conditions of that industry. Another industry-specific study has been proposed by Kurzak-Mabrouk (2020), who focuses on food businesses. This chapter addresses the critical strategic direction of NIP that refers to sustainable and responsible growth with regard to environmental protection. The author performed the interviews with top and middle managers of a large representative sample of Polish food companies. The findings are optimistic, since the majority of companies undertake the efforts towards comprehensive sustainable development strategies voluntarily, and not only due to legal enforcement. Still, the researched enterprises do not fully apply these strategies as yet. Resonating with the study by Lis (2020), Flieger (2020) identifies network types according to the collaboration maturity level in a local government unit. The research on collaborative networks in public organizations still remains unique. Therefore, this study fills the research gap. The author uses a case-based approach to identify the network features that change according to the maturity level of relationships. The findings are useful for the practice of developing collaboration in local governments and contribute to our understanding of the context for industrial development.

Strategies for Shaping Territorial Competitiveness

The concept of smart cities has become one of the most significant new lines of thinking to emerge in the social sciences in recent years, both from the research and policy angles. To date, the focus in smart specialization has been on what regions as a whole can do to bring about innovation, but it hasn’t necessarily addressed the role cities play within the field. This book aims to address that gap, drawing together a team of leading contributors, to illustrate this process with particular focus on cities. Smart Development in Smart Communities discusses the cross-fertilization between smart specialization and cities in fostering smart development and its interactions with the macro-, micro- and meso-economic framework, from both a theoretical and applied perspective. Specific topics covered by the book include: human capital formation and utilization; centralized/decentralized industrial policies; innovation policies; collective learning; and the role of public utilities in sustaining smart development processes. This book tackles some of the most important questions that must be faced when investigating how structural change and innovation processes are shaping local and global economic development. It will be of interest to academics and researchers in the area of Development Economics, Urban Studies and Public Management.

Smart Development in Smart Communities

Structural change is an evolutionary process that is often cumulative within territories, improving the quality of life and achieving higher development levels. At the same time, smart cities,
education and social innovation are essential to promoting sustainable development. This book examines regional and entrepreneurial development as a creative and dynamic concept by considering the role of these dimensions in promoting a virtuous cycle for long-term sustainable development.

The Life Cycle of Clusters

One of the most pivotal tasks of a regional government is to find different and innovative ways to develop their economies. Formulating universities, in that respect, potentially holds the key to competitive global economic success. Smart Specialization Strategies and the Role of Entrepreneurial Universities is a crucial reference source that examines a new competitive paradigm where universities can act as a partner institution, policy actor, and producer of knowledge that can affect the potential for economic growth and development of regions. While highlighting topics such as economic development, entrepreneurship ecosystem evolution, and regional competitiveness, this publication explores the varying dynamics that are evolving toward the successful mobilization of university resources on regional economies. This book is ideally designed for policymakers, administrators, researchers, developers, academicians, marketers, and business professionals.

Strategic Approaches to Regional Development

This book explores the role of cities and the urban-rural linkages in spurring innovation embedded in spatial planning, strategic and economic planning, and decision support systems. In particular, the contributions examine the complexity of the current transitional phase towards achieving smart, inclusive and sustainable growth, and investigate the post-2020 UE cohesion policy. The main topics include: Innovation dynamics and smart cities; Urban regeneration - community-led and PPP; Inland and urban area development; Mobility, accessibility, infrastructures; Heritage, landscape and Identity; and Risk management, Environment and Energy. The book includes a selection of articles accepted for presentation and discussion at the 3rd International Symposium New Metropolitan Perspectives (ISTH2020), held at the University of Reggio Calabria, Italy on 22-25 May 2018. The symposium, which addressed the challenge of local knowledge and innovation dynamics towards territory attractiveness, hosted the final event of the MAPS-LED project under Horizon2020 - MSCA RISE.

Higher Education in the Arab World

This book discusses the importance of innovation and entrepreneurial ecosystems in supporting regional competitiveness. It also encourages academics, business professionals and policy-makers to rethink innovation ecosystems as drivers of regional competitiveness, demonstrating the complex interactions between regional economic and social actors, and their impact on regional competitiveness. Further, the book examines the role of entrepreneurship and innovation policies in different regions (e.g. lagging regions, rural regions, etc.), and describes critical success factors in multi-level technologies and innovation policies and strategies.

Smart Specialization Strategies and the Role of Entrepreneurial Universities

This proceedings book presents a comprehensive view of “smart” technologies and perspectives of their application in various areas of economic activity. The authors of the book combined the results of the cutting-edge research on the topic of “smart” technologies in the digital economy and Industry 4.0 and developed a unified scientific concept. The current experience has been considered, and the prospects for the application of “smart” technologies in society to promote social advance have been identified. “Smart” technologies in public administration and law, as well as the experience in development of e-government, have been examined. “Smart” technologies in business activity have been studied, and the transition from digital business to business 4.0 has been justified. The book contains the collection of the best works following the results of the 13th International Research-to-Practice Conference “Smart Technologies” for society, state and economy which was run by the Institute of Scientific Communications (ISC) and was held on July 2-3, 2020. The target audience of this book includes researchers investigating fundamental and applied problems of development of “smart” technologies, as well as concerned
parties outside the academic community, in particular, representatives of the digital society, high-tech business entities and officials regulating the digital economy and Industry 4.0.

The Oxford Handbook of Local Competitiveness

This book explores statistical models in regional specialization, presenting a brand new measure. It begins by reviewing existing indicators and models of regional specialization before outlining a newly created, spatially embedded model of specialization based on the spatial distribution of firms. It addresses the various applications of the model, and how the model can be used in regional policy.

Smart Specialisation

This open access book presents the outcomes of the symposium “NEW METROPOLITAN PERSPECTIVES,” held at Mediterranea University, Reggio Calabria, Italy on May 26-28, 2020. Addressing the challenge of Knowledge Dynamics and Innovation-driven Policies Towards Urban and Regional Transition, the book presents a multi-disciplinary debate on the new frontiers of strategic and spatial planning, economic programs and decision support tools in connection with urban-rural area networks and metropolitan centers. The respective papers focus on six major tracks: Innovation dynamics, smart cities and ICT; Urban regeneration, community-led practices and PPP; Local development, inland and urban areas in territorial cohesion strategies; Mobility, accessibility and infrastructures; Heritage, landscape and identity; and Risk management, environment and energy. The book also includes a Special Section on Rregion United Nations 2020-2030. Given its scope, the book will benefit all researchers, practitioners and policymakers interested in issues concerning metropolitan and marginal areas.

Entrepreneurship, Technology Commercialisation, and Innovation Policy in Africa

The aim of this Handbook is to take stock of regional competitiveness and complementary concepts as a means of presenting a state-of-the-art discussion of the contemporary theories, perspectives and empirical explanations that help make sense of the determinants of uneven development across regions. Drawing on an international field of leading scholars, the book is assembled and organized so that readers can first learn about the theoretical underpinnings of regional competitiveness and development theory, before moving on to deeper discussions of key factors and principal elements, the emergence of allied concepts, empirical applications, and the policy context.

EU Cohesion Policy

EU Cohesion Policy and Spatial Governance

Smart specialisation is the new policy approach to the development of regional innovation systems across Europe and it involves fostering innovative and entrepreneurial initiatives which are well tailored to the local context. The different technologies, skills profiles, business activities, institutions and sectors which reflect a region’s economic strengths and potential are to be fostered and encouraged to diversify in ways which also exploit the region’s linkages with broader global value-chains. Yet, the ideas contained in the smart specialisation agenda have until now been primarily conceptual in nature. The Empirical and Institutional Dimensions of Smart Specialisation draws together some of the leading regional economists and scientists in Europe to analyse how smart specialisation is working in practice. This book investigates different dimensions of the agenda as it is developing across parts of Europe from both quantitative and qualitative perspectives. The quantitative analysis examines the nature of the diversification processes undertaken by regions and the interplay between the chosen local regional development priorities and the wider global value-chain impacts of these choices. Meanwhile, the qualitative analysis examines the institutional opportunities and challenges facing policy makers and the key elements most likely to provide the underpinnings of a workable set of policy settings. The book is aimed both at academic researchers interested in the interface between economic geography and regional innovation systems as well as at policy makers making public
policy decisions related to regional development at the local, city, regional or national levels.

Measuring Regional Specialisation

“This monograph presents the experience in the implementation of smart specialization strategies (S3) from multi-level policy governance, as well as from the bottom-up perspectives of firms, clusters, and networks in selected European countries. The presented research focuses on relevance and feasibility of the S3 adoption, emphasizing the importance of linking policy considerations with partnerships at lower governance levels. The major contribution of the presented research rests in theoretical implications and practical recommendations relevant for the implementation of regional S3 in the European context, with the possibility of place-based adoption in other environments. The book is also valuable for synthesizing the most recent advancements in smart specialization as policy concept and the concept of transformation and growth for territorial units and economic entities. This book aims to further diffuse and expand the academic community's learning of the new S3 approach in Europe and beyond. The book will be of interest and useful to the academic community of researchers and doctoral students focused on regional innovation development and related policy, as well as on entrepreneurship, networks, and clusters. Public sector professionals dealing with regional development, regional innovation policies, and industrial transformation will also benefit from its content.”

 Governing Smart Specialisation

In recent years, smart specialisation has been a key building block of regional economic and development policy across the European Union. Providing targeted support for innovation and research, it has helped identify those areas of greatest strategic potential, developing mechanisms to involve the fullest range of stakeholders, before setting strategic priorities and using the policy to maximize the knowledge-based potential of a region or territory. Governing Smart Specialisation contributes to the emerging debate about the role of the ‘entrepreneurial discovery process’ (EDP), which is at the heart of smart specialisation strategies for regional economic transformation. Particular focus in placed on what methods, procedures and institutional conditions are necessary in order to generate information that helps buttress policy decisions. It draws on existing literature that analyses the relevance of EDP within smart specialisation for regional policy. Chapters are complemented with case studies about regions with different geographical and socioeconomic characteristics in Europe: from Norwegian regions to the Greek region of East Macedonia and Thrace. As one of the first books to directly address the EDP, this is essential reading for students interested in regional economics, public policy, urban studies and technology innovation, as well as for policy makers in regional and national administrations.

"Smart Technologies" for Society, State and Economy

The Open Access version of this book, available at http://www.tandfebooks.com/doiview/10.4324/9781315401867, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 3.0 license. This book brings together academics, members of European institutions, and regional and national level policymakers in order to assess the performance and direction of EU Cohesion policy against the background of the most significant reforms to the policy in a generation. Responding to past criticisms of the effectiveness of the policy, the policy changes introduced in 2013 have aligned European Structural and Investment Funds with the Europe 2020 strategy and introduced measures to improve strategic coherence, performance and integrated development. EU Cohesion Policy: Reassessing performance and direction argues that policy can only be successfully developed and implemented if there is input from both academics and practitioners. The chapters in the book address four important issues: the effectiveness and impact of Cohesion policy at European, national and regional levels; the contribution of Cohesion policy to the Europe 2020 strategy of smart, sustainable and inclusive growth; the importance of quality of government and administrative capacity for the effective management of the Funds; and the inter-relationships between institutions, territory and place-based policies. The volume will be an invaluable resource to students, academics and policymakers across economics, regional studies, European studies and international relations.
Regional Helix Ecosystems and Sustainable Growth

This book focuses on the main challenges that cities, regions and other territories at sub-national level face when it comes to designing and implementing a territorial strategy for economic development and competitiveness. There is a widespread recognition that territories need to construct strategies that focus on shaping sustainable competitive advantages. To do this they draw upon their own unique resources and capabilities alongside intelligence on existing technological and market trends. However, there is still a notorious lack of both theoretical and empirical research on this issue. The first part of this book develops a theoretical framework for understanding and analysing territorial strategy. This framework asks three questions of territorial strategy - what for, what, and how - looking closely at the key relationship between strategy and policy. The second part is dedicated to exploring this framework in practice through application to a series of unique cases from around the world at different territorial levels, from regions such as the Basque Country, Navarre and Murcia in Spain, Okanagan (British Columbia) in Canada, Wales in the United Kingdom, and the cross-border region of the Øresund in Denmark-Sweden, as well as the city of Rafaela in Argentina. Each case offers something different and enables the framework to be thoroughly tested, generating concluding reflections that add real value for scholars and policy-makers interested in and working in the field of territorial strategy. This volume is intended for the academic community, the policy community (government leaders, policy-makers, policy researchers and consultants) and university students and teachers at different levels interested in the areas of territorial competitiveness, regional development, competitiveness policies and processes of territorial strategy.

Sustainable Urbanization

One-size-fits-all cluster policies have been rightly criticized in the literature. One promising approach is to focus cluster policies on the specific needs of firms depending on the stage of development (emergence, growth, sustainment or decline) their cluster is in. In this highly insightful book, these stage-specific cluster policies are analysed and evaluated. Moreover, several chapters also focus on smart specialization policies to promote regional development by taking into account the emergence and adaptation of clusters and industries.

Revitalising Lagging Regions

The existence and persistence of regional disparities between European regions require context-tailored policies to promote structural change. This book explores the congruence between place-based development and regional competitiveness in the EU context. Drawing on a range of social science disciplines, this book unpicks the complexity of regional transformation processes, aiming to enhance the applicability and transferability of theoretical approaches to innovation and place-based regional development in diverse European territorial settings. The contributors have a particular focus on less-favoured regions and on the application of Smart Specialisation - a strategic approach to innovation-based regional development - to the issues at hand. The book comes at a critical moment, meeting the growing demand of academics, practitioners and policymakers with an interest in promoting regional economic growth and well-being.

Handbook of Regions and Competitiveness

This Handbook brings together a group of leading scholars, thinkers, policy makers, and business leaders to identify, articulate, and analyze what influences and shapes local competitiveness and what places can do to enhance their economic performance.

The Empirical and Institutional Dimensions of Smart Specialisation

This Expo book brings together leading academic and policymaker experts to reflect on the significant challenges faced by lagging regions in participating in the European Union's Research and Innovation Strategies for Smart Specialisation (RIS3) programme. In doing so, the book offers a set of new policy recommendations on the design and implementation of appropriate Smart Specialisation Strategies (S3) in lagging regions, which may enable them to benefit from the opportunities of digitalisation and Industry 4.0 (I4.0).
Partnerships for Regional Innovation and Development

Regional Innovation Strategies offers the first comprehensive analysis of the new wave of innovation-oriented regional policies. It draws conclusions from the European Regional Technology Plans and Regional Innovation Strategies, both in old industrialised areas and in regions where development is slow, and compares this with US and Canadian experiences. Anticipating the enlargement of the EU, Regional Innovation Strategies also assesses the growing interest in the subject within policy, academic and practitioner circles in Central and Eastern European countries. This book aims to provide information on the new regional innovation policies and gives the first assessment of this promising pool of regional experiences.

Quantitative Methods for Place-Based Innovation Policy

This volume gathers the latest advances and innovations in the triple helix of university-industry-government relations, as presented by leading international researchers at the II International Triple Helix Summit 2018, held in Dubai, UAE on November 10-13, 2018, which brought together experts, practitioners and academics across disciplines that address the dynamics of government, industry and academia. It covers analysis, theory, measurements and empirical enquiry in all aspects of university-industry-government interactions, as well as the international bases and dimensions of triple helix relations, their impacts, and social, economic, political, cultural, health and environmental implications. It also examines the role of government/academia/industry in building innovation-based cities and nations, and in transforming nations into knowledge-based sustainable economies. The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaboration among different specialists.

Advances in the Theory and Practice of Smart Specialization

Driven by European Union policy challenges, this cutting-edge book focuses upon the Regional Innovation Impact (RII) of universities, to analyse the socioeconomic impact that universities in Europe have on their hometowns, metropolitan areas and regions.

Smart Specialisation in the World, an EU Policy Approach Helping to Discover Innovation Globally

Discussing the ongoing and future challenges of EU Cohesion Policy, this book critically addresses the economic, social and territorial challenges at the heart of the EU’s policy. It identifies the multifaceted and dynamic nature of the policy as well as the cohesions goal interlinkage with other policies and considers unresolved questions of strategic importance in territorial governance, urban and regional inequalities, and social aspects and wellbeing.

New Metropolitan Perspectives

With today’s current problems, including forced migrations, inadequate education and healthcare systems, environmental threats, economic crises, poverty, etc., it has become evident that systemic social change is needed. Unfortunately, creating, maintaining, and fostering sustainable social value is not easy. In this respect, social entrepreneurs can act as change agents with their social missions. Yet, the role of social entrepreneurship in creating sustainable social value is still in an embryonic state. Creating Social Value Through Social Entrepreneurship contains expert research that links social entrepreneurship and social value in order to further understand the role of social entrepreneurship in creating social value and to highlight the importance of social entrepreneurs in emerging economies. While covering topics that include crowdfunding, social enterprise, social entrepreneurship ecosystems, and the triggers and challenges of social entrepreneurship, this book seeks to extend the social entrepreneurship contribution to social impact. The book is of value to entrepreneurs, managers, academicians, researchers, and students in various fields that include economics, management, and entrepreneurship.

Regional Innovation Strategies
This is the first book on a new policy approach that has been widely adopted in Europe and beyond. It analyses the concept of smart specialisation and discuss the need for smart specialisation strategies, explains why the approach is new and different from more standard policy processes and explores what are the conditions for successful implementation. Smart Specialisation: Opportunities and Challenges for Regional Innovation Policy describes the origin of the concept, explains when a smart specialisation policy is necessary, provides a detailed analysis of the design principles of the policy and discuss the pertinence of this approach according to regional development levels. Finally the book discuss the practical implementation phase of the process - based on the first feedback acquired from certain regions engaged in the preparation of their smart specialisation strategy. The book is original in that it provides the first full analysis of smart specialisation strategies both at theoretical and practical levels. It has been written at the critical period of the implementation of smart specialisation strategies in every region in Europe. The fact that the EU has adopted smart specialisation as a mandatory principle for every region and member states will make this book well received by and very useful for: i) policy makers in regional and national administrations in Europe, ii) policy makers in other parts of the world who are in charge of regional policy and have heard about the concept, iii) consultants, analysts and experts who are active on the "markets for smart specialisation diagnosis and expertise", iv) scholars, researchers and graduate students working in the field of regional studies, technology policy and geography of innovation.
